

HYDROTHERAPY OVERVIEW

Allsorts Hydrotherapy has a Hawksmoor trained qualified hydrotherapist holding ABC Level 3 certificate for pool & treadmill hydrotherapy and is registered with The Canine Hydrotherapy Association which endorses the high standards that the centre and staff maintain.

Hydrotherapy aids the rehabilitation of small animals recovering from operations and medical conditions. Hydrotherapy can also aid weight loss, fitness and provide large breed puppies a safe way to exercise without damaging their joints.

We work closely with your vet and other animal health care professionals to achieve the maximum benefit from the sessions.

The pool measures 2.1 x 4.2 x 1 meters is heated at 30 degrees, has external & internal ramps for easy access and a resting platform; also available a "help em up harness" for quadriplegic dogs.

The pool has adjustable resistance water jets, under water & above water cameras to assess & record limb motion and is ideal for non-weight bearing exercise.

Blue connect continuously measures key parameters of the pool: temperature, PH, chlorine, & conductivity via an app so that the water quality remains at the standard provided by CHA with additional external monthly bacteria testing.

The Aquatic treadmill is pool fed, has two doors and ramps for easy entrance and exit. All dogs are fitted with either a buoyancy aid or harness for safety. The treadmill complements the therapy received in the pool and is the preference for patients recovering from spinal surgery.
